BACKEND DEVELOPER

Designed, developed, and maintained server-side applications and APIs ensuring high performance, scalability, and security. Collaborated closely with frontend developers, database engineers, and DevOps teams to build efficient, reliable, and maintainable systems. Implemented data models, authentication, and business logic while optimizing performance and resource utilization.

KEY COMPETENCIES

Backend Development
API Design & Integration
Database Management

Security & Authentication
Performance Optimization
Version Control

Problem Solving
Collaboration
Testing & Debugging

PROFESSIONAL EXPERIENCE

NASA Space App Challenge - GRIT-X-AWA

SEP 2025 to OCT 2025

Backend API Deployment Lead

Led backend and API development for a space-data visualization project addressing real-time Earth observation challenges. Designed efficient APIs and integrated multiple NASA datasets for seamless data access and analysis.

Accomplishments:

- Collaborated with a diverse international team across multiple time zones to ensure seamless coordination.
- Successfully developed and deployed a functional prototype within 12 hours.
- Improved backend performance and reliability under strict time constraints.
- Contributed to the team's recognition for innovation and technical excellence.
